DETAILED ACTION

Claim Objections

1. Claim 20 is objected to because of the following informalities: Claim 20 appears to be a duplicate of claim 1. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 19 is rejected under 35 U.S.C. 102(e) as being anticipated by Kidd (5,958,778). Kidd teaches a container for the drying of biological samples. The container is best shown in Figures 1, 2 and 6 and is described in columns 4 and 5. The container is comprised of a tube body (3) a cap(2) with a flange that extends perpendicularly inward to form an opening (5) that is covered by a membrane (6).

Allowable Subject Matter

- 4. Claims 1-9 and 11-18 are allowed. Claims 1-8 and 15-18 were deemed allowable in the previous Office Action. Claim 9 is now allowed in response to applicant's amendment submitted 11/19/2003.
- 5. The following is a statement of reasons for the indication of allowable subject matter: In claim 9, applicant has now claimed an apparatus with the following combination of elements: a tubular body with opposed ends, one of them being open; an end cap with a sidewall and a flange extending substantially perpendicularly inwardly from the cap to form a support surface and also surrounding and defining an aperture, said end cap removably attached to the open end of the tubular body; and a ring sized to fit coaxially within the end cap contiguous with a membrane to be sandwiched between the end cap and the ring. The Examiner did not find prior art that contained or suggested this combination of features.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within
